### Hi-Temp Alert V2 instruction addendum.

The newer version of the Hi-Temp Alert V2. has a plug and play wiring system. The wires can be cut and spliced if needed for longer runs. In doing so use shielded cable, to help eliminate stray induced interference. There are 3 connectors on the main alarm box

1. Sensor
2. Power supply
3. remote unit connection

The connection for the power supply can be disconnected from the plug in terminal inside the power supply ( grey box ).

The power supply comes set for 208/240 Volt. This can be changed to 120 Volts by reversing the blue jumper in the power supply box.
